                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a nucleic acid (I, ABL60244) that encodes a plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 6; Page 10-12; 18pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid encoding plant phosphomevalonate kinase, useful identifying modulators, potentially useful as herbicides and grovergulators -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2002-445360/48.

Hurban P;
                                                                                                                                                                                     they can be used as protein expression modulators. (I) can be used in identifying homologous or related genes, in producing compositions that modulate the expression or function of their encoded proteins, mapping functional regions of the proteins, and in studying associated physiological pathways. (I) can also be used: (I) for the genetic manipulation of cells, particularly plant cells; (2) in screening assays of various plant strains to determine the strains that are best capable of withstanding a particular disease or environmental stress; (3) for enhancing or inhibiting production of a biosynthetic modification and for screening purposes, to generate additional copies of the nucleic state to state the strain copies of the nucleic state to state the strain copies of the nucleic state to state the strain stress of the nucleic state to state the strain stress of the nucleic state the strain strains of the strain strains.
                                                                                            acids, to generate ribozymes or antisense oligonucleotides, and as single-stranded DNA probes or as triple-stand forming oligonucleotides; and (5) for generating genetically modified transgenic organisms.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (GARC/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a nucleic acid (I, ABL60244) that encodes a plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK. The present sequence is that of a PMVK encoding DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding identifying modulators, po

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a nucleic acid (I, ABL60244) that encodes a plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK, (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK. The present sequence is that of a PMVK encoding DN7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1228
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1108

                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                     Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes plant polynucleotides encoding CC polypeptides involved in the production and modification of isoprenoids, CC such as terpenoid and steroid compounds. The polynucleotides are used CC in genome mapping, in physical mapping and in positional cloning of CC genes. The polynucleotides and polypeptides are useful in forestry and CC agriculture for manipulation of isoprenoid metabolism, in medicine for CC therapeutic effects, including direct application in diseased organisms or indirect application by transgenic organisms and in fermentation and CC chemical processing industries involving isoprenoids. In plant CC applications, manipulating isoprenoid pathways or isoprenoid composition CC may, for example, affect plant development, pest resistance, and the CC value of extractives (e.g. plane and myrcene). The ubiquitous and CC varied roles of isoprenoids make the polynucleotides attractive targets CC analogo and Anbieuod to Anbieuod a variety of fields. Ana69527 to CC Ana69690 and Anbieuod to Anbieuod and proteins used in the exemplification of the CC present invention.

                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                            The invention relates to a nucleic acid (I ABL60244) that encodes a plant phosphomevalonate kinase (PMVK, ABB77505), excluding the known fully defined partial sequences ABL60245-ABL60247. Plant PMVK; (I), constructs and host cells that contain (I) are used to identify agents that bind to and/or modulate activity of PMVK, potentially useful as herbicides and growth regulators. (I) is also used for recombinant production of PMVK. The present sequence is that of a PMVK encoding DNP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

The invention relates to a method for producing prenyl alcohol comprisin culturing mutated cells, having been mutated so as to reduce the amount of transcriptional product of squalene synthase gene transcriptional activity, and then collecting prenyl alcohol from the culture medium. The method is for the production of prenyl alcohols, which is for use in industrial synthesis of isopremoid terpenoid compounds particularly physiologically-active prenyl alcohol geometric isomers. This polynuclectide sequence represents a nucleic acid sequence relating to the method for producing prenyl alcohol comprising culturing mutated
                                                                                                                                                                                                                                                                                                      Disclosure;

                                                                                                                                                                                      ₽
                                                                                                                                                                                                                                                                                                                                                                                        cc expression recombinant DNA for genome integration into a host contains prenyl diphosphate synthase gene or its variant; and cc (B) collecting product from the culture medium. Also described is: (1) a cm method for producing prenyl alcohol in which the expression recombinant DNA contains: (a) a hydroxymethylglutaryl-COA reductase cc gene; (2) a process for producing geranylgeraniol, comprising: (2) a process for producing geranylgeraniol comprising: (a) constructing a recombinant by transferring an expression cc recombinant DNA for genome integration into a host which cc contains hydroxymethylglutaryl-COA reductase gene or its variant; and cc in which the expression recombinant DNA also contains an isopentenyl cc in which the expression recombinant DNA also contains an isopentenyl cc in which the expression recombinant DNA also contains an isopentenyl cc in which the expression recombinant DNA also contains an isopentenyl cc in which the expression recombinant DNA also contains an isopentenyl cc mevalonate delta-isomerase gene, mevalonate kinase gene, or cc mevalonate diphosphate decarboxylase gene. The methods are used for the production of prenyl alcohols, particularly for use in industrial cc synthesis of isoprenoid-terpenoid compounds e.g. physiologically-active represent prenyl diphosphate synthase genes and related PCR primers used in the methods of the invention

                                                                                                              1337 ATCTAGATGTTATCCATATGATAGCACAAACGTCTCATTGTCTTGCACAAGGGAAGGTCG 1396
                                                                                                                                                                                                                                                       (pseudogene). Genes of the invention are used to enhance biosynthesis of isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP) and isoprenoid pathway derived products in the plastids of transgenic plants and microalgae, for producing herbicide or antibiotic resistant transgenic plants and microalgae, for providing transformed cells with increased isoprenoid production compared to non-transformed cells, and for providing a cell with an inserted polynucleotide sequence encoding one or more products of interest. The present sequence is yeast phosphomevalonate kinase (PMK; ERG8) EC 2.7.4.2. encoding orf.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1577

                                                                                                                                                                                         and isoprenoid pathway derived products in the plastids of transgenic plants and microalgae, for producing herbicide or antibiotic resistant transgenic plants and microalgae, for providing transformed cells with increased isoprenoid production compared to non-transformed cells, and for providing a cell with an inserted polynucleotide sequence encoding one or more products of interest. The present sequence is operon D DNA encoding the entire mevalonate pathway. This operon contains secretisiae orfs encoding phosphomevalonate kinase (PMK), mevalonate transformed to the enterminate of the products of the enterminate pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                           and isoprenoid biosynthetic pathways and inactive gene sites (pseudogene). Genes of the invention are used to enhance biosynthesis of isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Use of specific genes of mevalonate and isoprenoid biosynthetic pathways, for providing a cell with herbicide or antibiotic resistance, and for providing transformed cells having increased isoprenoid production -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hahn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1517

of isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP) and isopentenyl diphosphate (IPP), dimethylallyl diphosphate (DMAPP) and isopremoid pathway derived products in the plastids of transgenic plants and microalgae, for products in the plastids of transgenic plants and microalgae, for providing transformed cells with increased isopremoid production compared to non-transformed cells, and for providing a cell with an inserted polynucleotide sequence encoding one or more products of interest. The present sequence is operon B DNA encoding the entire mevalonate pathway. This operon contains S. cerevisiae orfs encoding phosphomevalonate kinase (PMK), mevalonate kinase (MVK), mevalonate diphosphate decarboxylase (MDD), acetoacetyl thiolase (AACT) and A. thaliana orfs encoding 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-COA) synthase (HMGS) and HMG-COA reductase (HMGRt).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of specific genes of mevalonate and isoprenoid biosynthetic pathways, for providing a cell with herbicide or antibiotic resistance, and for providing transformed cells having increased isoprenoid
Sequence 7695 BP;
                                                                                                                                                                                                                                                                                                                                                                       and isoprenoid biosynthetic pathways and inactive gene sites (pseudogene). Genes of the invention are used to enhance biosynthesis
                                                                                                                                                                                                                                                                                                                                                                                                                               The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GeneSplicer (Whaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/cddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant of GlimmerM, see Mihaela Pertea,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             http://ftp.genome.washington.edu/RM/RepeatMasker.html).

Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/Grail-1.3/),
GENSCAN (Chris Burge, MIT, http://CR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.cbs.dtu.dk/services/WetGene2/) and
SplicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/cgi-bin/sp.cgi).
Genes encoding tRNAs are predicted by tRNAscan SE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TTGGGCTCATCTGCAGCAATGACAACCG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence features of the regions of 1,381,565 bp covered by twenty one physically assigned Pl and TAC clones

                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5' clone is MVA3 and the 3' clone is MCM23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (02-MAR-1998) Yasukazu Nakamura, Kazusa DNA Research Institute, Department of Plant Gene Research; 1532-3, Yana, Kisarzazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp, Tel:81-438-52-3935, Fax:81-438-52-3934)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
